## Ideal for:

Riprap

Drainages

Landscaping

Our 2-6-inch cobble consists of rock that passes through a 6-inch grizzly and is retained on a 2-inch square screen. Since the larger size of rock is sorted using a grizzly it can sometimes be larger than 6" in one dimension. Since this rock is not crushed, it provides a natural look when placed. This product has been particularly popular with our customers looking for rock for stream restoration projects and rock channels. The variation in rock sizes, shapes, and colors makes it a great alternative to the boring gray river rock that is so prevalent in the Grand Valley.
