The 5/8-inch-2-inch natural screened rock consists of pit run material that passes a 2-inch screen and is retained on a 5/8-inch screen. Because it is screened from pit run rock, none of it is crushed. This rock is a favorite for folks looking for a natural uncrushed rock look. Because of the variation of rock colors and types this screened rock is also a nice alternative to the gray river rock found in the Grand Valley.

**Ideal for:**  
**Landscaping**  
**Drainages**  
**General Use**
