Our decomposed granite trail mix is a popular choice for people looking for a more natural look. It consists of a mix of materials finer than ½-inch. It is purposely mixed relatively coarse. Due to its coarseness it doesn't pack as tight as our roadbase or sand products, although some compaction can be expected. In addition to placement on trails and walkways, our decomposed granite mix is also a popular choice for landscaped areas.

## Ideal for:

Trails

Walking Areas

Landscaping
